

# SOUTHAMPTON FOOTBALL CLUB

Installation of screens, cameras and IPTV.

## Intevi and Southampton Football Club.

When Premier League football club Southampton wanted to upgrade its training facilities, it knew that leading-edge audiovisual technology could help it gain competitive advantage.

The club turned to local digital media specialist Intevi.

Fundamental to its vision was the provision of a cutting edge, integrated audiovisual infrastructure that would combine facility-wide PA and audio, digital signage and digital TV distributed throughout. On top of that, and most prevalent, was a complete system for capturing its players' performances in training – plus the performance of potential recruitment targets – and subsequently analysing on-screen.

Intevi provided both audio and video distribution solutions throughout the facility, including a full auditorium that is operated for internal staff meetings and club press conferences with the media.

At the heart of the video distribution system is a Tripleplay Video Management Server (VMS), which integrates with a similar solution previously installed at the St Mary's stadium.

## Unique Factor

The Black Box Room:

The player performances and scouting network are scrutinised and analysed for improvement opportunities.

Intevi fitted a Samsung 95 inch commercial display, which was the first in the UK to use a touch overlay, meaning the users can easily reconfigure the room.
