

# SCANIA TRUCKS

Digital posters and bespoke analytics software.

Live data integration and digital comms.

Scania Trucks GB Ltd recently chose to work with the Intevi digital signage solution for a nationwide roll out of corporate comms displays to over 120 end points.

The Scala CMS setup allows for scheduled and real time information to be broadcast across their network.

Screens have been strategically placed in receptions, canteens, work shops and the driver depots to ensure the entire business is kept informed with up to the minute information.

Due to the system's integration and Intevi's custom applications, we are able to display live business data from various internal databases and spreadsheets as eye catching animated videos.

## Unique Factor

When required, the system allows for HD video live streaming of C level broadcasts and live footage.
